Career Objective

Curiosity has always been the foundation of my learning journey, inspiring me to explore software development and artificial intelligence. I aim to apply my technical skills and problem-solving abilities to build solutions while continuously growing as an engineer.

Projects

PotSpot | *Python, PyTorch, RF-DETR, Supervision, Roboflow* | GitHub — Apr. 2026 – Present

- Fine-tuned a transformer-based RF-DETR SegNano model for real-time pothole detection and instance segmentation across 3 road-anomaly classes (Potholes, Manholes, Unmarked Bumps)
- Sourced and preprocessed a 1,553-image COCO segmentation dataset via the Roboflow API, applying 312×312 resizing, grayscale conversion
- Model accurately detected multi-pothole incidents with 76% recall, demonstrating high real-world reliability across diverse road-anomaly classes

Security Guardian | *Python, LLM, gitagent* | GitHub — Mar. 2026 – Apr. 2026

- Built an Ai security scanner agent that automatically scans GitHub pull requests for hardcoded secrets, OWASP Top 10 vulnerabilities, and unsafe code patterns
- Implemented severity-based PR blocking (Critical/High findings) and provided actionable remediation guidance to developers

FitBuddy | *Java, XML, Firebase, Android SDK*| GitHub — Apr. 2024 – Jun. 2024

- Developed an Android fitness tracking application that monitors step count, distance traveled, and calories burned with real-time sensor integration and secure user authentication
- Integrated runtime permission handling to access device sensors (step counter and accelerometer), enabling accurate tracking of fitness metrics and delivering immediate, actionable feedback to users
- Built email authentication with automated verification emails upon account creation

Professional Training

Cybersecurity Trainee — Dec. 2025 – Jan. 2026

SunBeam Infotech Pvt. Ltd. — *Pune, MH*

- Build and deployed Snort (IDS) for intrusion detection, configured Nagios Core for real-time host and service monitoring, and set up pfSense firewall with DHCP, DNS, and port-forwarding rules
- Performed vulnerability assessments including SQL Injection testing, enforced Fail2ban to prevent brute-force attacks, and analyzed Apache2 logs for incident response

Skills

Programming: Java, Python, SQL, JavaScript, Node.js, HTML/CSS
Frameworks: Express.js, Angular 19, Android SDK
Tools: Git, GitHub, Postman, Android Studio, Figma, Antigravity, OpenCode, Open Design
Operating Systems: Linux (Debian)

Certifications & Extracurricular Activities

- **Participated in MumbaiHacks 2025, the largest Agentic AI hackathon** | TEAM — Nov. 2025
- **2nd Runner-Up, TECH-YODDHA 2025** | DKTE — Aug. 2025
- **Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate** | *Oracle* — Jul. 2025

Education

D.K.T.E. Society's Textile & Engineering Institute — Ichalkaranji, MH

B.Tech in Computer Science & Engg. (AI & ML) CGPA: 7.82 — *Sep. 2024 – Present*

Government Polytechnic — Miraj, MH

Diploma in Computer Engg. Percentage: 87.94% — *Jun. 2021 – May 2024*
